CAREER OBJECTIVE

A motivated Computer Science and Business Systems student aspiring for a challenging role in software engineering or data analytics. I aim to apply my programming skills, business acumen, and analytical thinking to deliver impactful technology solutions and contribute to organizational growth.

TECHNICAL SKILLS

PROGRAMMING

Java

Python

JavaScript

WEB DEVELOPMENT

HTML5

CSS3

React.js

Node.js

Express.js

DATABASES & ARCHITECTURE

PostgreSQL

REST APIs

Distributed Logic

TOOLS & DEV ENVIRONMENTS

Git & GitHub

VS Code

Eclipse

CERTIFICATIONS

Programming in Java

NPTEL

Rigorous certified qualification in OOP, data structures, multithreading, and core Java.

Fullstack Development Bootcamp

Udemy

Intensive fullstack bootcamp specializing in React, Node.js, and database integration.

Introduction to Software Engineering

IBM /
Coursera

Mastery of core engineering phases, agile operations, clean practices, and collaboration.

EDUCATION

B.Tech in Computer Science & Business Systems

2023 – 2027

Panimalar Engineering College

CGPA: 8.0/10

Higher Secondary Education (Class XII)

2023

Sethu Bhaskara Matric Higher Secondary School

Score: 87.3%

Secondary Education (Class X)

2021

Sethu Bhaskara Matric Higher Secondary School

Score: 100%

EXPERIENCE

Business Analytics Intern

Online

Codec Technologies

- Analyzed business data through collection, cleaning, and visualization to derive actionable strategic insights.
- Created reports and dashboards to track team performance and support data-driven decision-making processes.

PROJECTS

AI-Based Deepfake Detection & Prevention System

Python, TensorFlow, OpenCV

- Designed and structured an intelligent vision-based deepfake analyzer focusing on ethical AI principles.
- Utilized Advanced Machine Learning concepts to recognize synthesized anomalies and implement facial mesh tracking.
- Introduced consent-aware restrictions to protect user privacy and prevent misuse of sensitive media.

Server-Aware Timing System for Online Assessments

React.js, Node.js, Asynchronous APIs

- Developed a countdown mechanism (Team NexusOne) that automatically pauses the client timer during server submission buffers and resumes only after receiving a secure server validation acknowledgement, ensuring 100% exam timing fairness.
- Designed high-fidelity live dashboard simulation using React.js to demonstrate timing differences under varying simulated network latency (from 1s to 5s buffers), highlighting time saved for candidate assessments.
